Agenda

In fifteen minutes, we'll show how the sandwich was made and why it's worth adopting.

TIMELINE, DRAWN TO SCALE (15 MIN)

Main item: live walkthrough of the four user steps

We leave with: approval to serve the sandwich method at the next team lunch.

Decision owner: manager.

Design Process

We built the sandwich in five steps and checked it before serving.

DOOSAN Bobcat

STEPS

1. **Gathered**
   two slices of white bread, peanut butter, grape jelly and a butter knife.
2. **Spread**
   2 tbsp of peanut butter edge to edge on the first slice.
3. **Spread**
   1 tbsp of jelly on the second slice, leaving a 5 mm border.
4. **Pressed**
   the slices together with both spreads facing in.
5. **Cut**
   the sandwich corner to corner into two triangles.

HOW THE WORK WAS CHECKED

Check	Method	Result
Coverage	Visual check to crust	**95%**
Leakage	Held upright 60 s	**No drips**
Hold	Lifted by one corner	**Stayed intact**
Taste	Blind test, 3 people	**3 of 3 liked**

Architecture

Ingredients move one way, from storage to plate, through three stations.

WHERE THE INGREDIENTS LIVE

Bread	Peanut butter	Jelly	Knife
Pantry, shelf 2	Pantry, shelf 2	Refrigerator door	Utensil drawer

PARTS AND FLOW

Data flows left to right only; nothing returns to an earlier station.

User Guide

Anyone can make one by following four steps.

STEPS

Step 1
Open the bread bag and both jars.

Step 2
Spread each slice, one spread per slice.

Step 3
Close the sandwich and press lightly.

Step 4
Cut, plate and put everything away.

LOADING AND SAVING

Action	Control	Note
Load bread	Bag twist tie	**Retie after use**
Load spreads	Jar lid, turn left	**Wipe knife between jars**
Save spreads	Jar lid, turn right	**Jelly back in fridge**
Save sandwich	Zip-top bag	**Eat within 4 hours**

WHAT THE TOOL HANDLES FOR YOU

- Rounded knife tip spreads without tearing the bread.
- Peanut butter layer keeps jelly from soaking through.
- Diagonal cut gives two easy-to-hold halves.

Value

The method makes lunch cheaper, consistent and easy to scale.

DOOSAN Bobcat

COST

$0.62

per sandwich, against $8 for a deli sandwich

CONSISTENCY

±5 g

spread weight across 10 builds

SCALE

10

sandwiches from one loaf and one set of jars

PROPOSED NEXT STEPS

- Serve at the next team lunch — In progress
- Test crunchy peanut butter — Proposed
- Write a one-page recipe card — Proposed

Blue = proposed
Amber = still in progress

Example content: all facts drafted for illustration, not from notes.
